# 開発環境用コンテナのセットアップ(Ubuntu以外のディストリビューション使用の場合)

Ubuntu 以外のディストリビューションを利用している場合でも、クロスコンパイラなどの導入を考えると

Ubuntu の環境を構築するのがお勧めです。

仮想マシンを作成するとリソースを消費しますので、コンテナ(LXC<sup>1) 2)</sup>でUbuntuの環境を作成する方法を紹介します。

ホストの環境は Debian(Jessie) を想定しています。

※ [emdebian](#) のリポジトリを追加し、[クロスコンパイラを導入する方法](#)<sup>3)</sup>もあるようです。

## Ubuntu コンテナの作成

### LXC パッケージの導入

LXC を使用するためのパッケージを導入します。

```
root@jessie:~# apt-get install lxc
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
  debootstrap dh-python libapparmor1 libmpdec2 libpython3-stdlib
  libpython3.4-minimal libpython3.4-stdlib
  libseccomp2 python3 python3-minimal python3.4 python3.4-minimal rsync
Suggested packages:
  lua5.2 python3-doc python3-tk python3-venv python3.4-venv python3.4-doc
  binutils binfmt-support
The following NEW packages will be installed:
  debootstrap dh-python libapparmor1 libmpdec2 libpython3-stdlib
  libpython3.4-minimal libpython3.4-stdlib
  libseccomp2 lxc python3 python3-minimal python3.4 python3.4-minimal rsync
0 upgraded, 14 newly installed, 0 to remove and 0 not upgraded.
Need to get 5,822 kB of archives.
After this operation, 22.7 MB of additional disk space will be used.

Universal Time is now:  Fri Jan  8 02:38:36 UTC 2016.

##
# The default user is 'ubuntu' with password 'ubuntu'!
# Use the 'sudo' command to run tasks as root in the container.
##

root@jessie:~#
```

## 設定

Debian の lxc-create では細かい設定をしてくれないので、手動で設定を変更します。

### **/var/lib/lxc/trusty/config の編集**

```
root@jessie:~# nano -w /var/lib/lxc/trusty/config
```

```
# Template used to create this container: /usr/share/lxc/templates/lxc-ubuntu
```

```
# Parameters passed to the template: -r trusty
# For additional config options, please look at lxc.container.conf(5)

# Common configuration
lxc.include = /usr/share/lxc/config/ubuntu.common.conf

# Container specific configuration
lxc.rootfs = /var/lib/lxc/trusty/rootfs
lxc.mount = /var/lib/lxc/trusty/fstab
lxc.utsname = trusty
lxc.arch = amd64

# Network configuration
lxc.network.type = veth
lxc.network.link = lxcbr0
lxc.network.flags = up

lxc.devtttydir = lxc
```

## lxcbr0 I/F の作成

bridge-utils パッケージを導入します。

```
root@jessie:~# apt-get install bridge-utils
```

/etc/network/interfaces を編集し、lxcbr0 の設定を追加します。

```
root@jessie:~# nano -w /etc/network/interfaces
```

```
# This file describes the network interfaces available on your system
# and how to activate them. For more information, see interfaces(5).

source /etc/network/interfaces.d/*

# The loopback network interface
auto lo
iface lo inet loopback

# The primary network interface
allow-hotplug eth0
iface eth0 inet dhcp

auto lxcbr0
iface lxcbr0 inet static
    address 192.168.8.1
    netmask 255.255.255.0
```

```
pre-up brctl addbr lxcbr0
```

## dnsmasq の導入

DHCPサーバ/DNSキャッシュ用 dnsmasq パッケージを導入します。

```
root@jessie:~# apt-get install dnsmasq
```

/etc/dnsmasq.conf を編集します。

```
root@jessie:~# nano -w /etc/dnsmasq.conf
```

下記エントリを追加します。

```
interface=lxcbr0
bind-interfaces
dhcp-range=192.168.8.50,192.168.8.150,12h
```

## iptables の設定

iptables の設定を自動化するため iptables-persistent パッケージを導入します。

導入時に現在のルールを保存するか聞かれるため eth0 への MASQUERADE 設定(コンテナから外へ抜けるため)を追加しておきます。

```
root@jessie:~# iptables -t nat -A POSTROUTING -o eth0 -j MASQUERADE
```

```
root@jessie:~# apt-get install iptables-persistent
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
  netfilter-persistent
The following NEW packages will be installed:
  iptables-persistent netfilter-persistent
0 upgraded, 2 newly installed, 0 to remove and 0 not upgraded.

## Ubuntu コンテナの起動

lxc-start コマンドで、作成した Ubuntu コンテナを起動します。

```
root@jessie:~# lxc-start -n trusty
lxc-start: No such file or directory - Mount of '/sys/fs/fuse/connections'
onto '/usr/lib/x86_64-linux-gnu/lxc/rootfs/sys/fs/fuse/connections' failed
